*For use in Whiteley Automated and Manual Hand Hygiene Dispensers. More information: whiteley.com.au/product/hand-hygiene-dispensers

Science behind Bactol®

Modern healthcare workers got the message: regular hand hygiene has never been so important. But with increased frequency comes dry, cracked skin which compromises skin integrity.

Bactol Sanitisers help alleviate this problem in two ways. Firstly, by delivering exactly the right kind and amount of cleaning agent for each hand hygiene application. Secondly, every Bactol product is enhanced with emollients that help keep skin soft, smooth and healthy.

The Bactol range of products are fully Australian made; the result of decades of research and development, including extensive feedback from healthcare workers and facilities.

A Bactol® Product for every application

5 moments for hand hygiene

Developed by the World Health Organisation as a baseline to prevent transmission of germs between patients, healthcare workers and surroundings.

1. Before touching patients

2. Immediately before a procedure

5. After touching a patient's surroundings

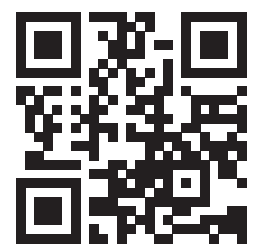

4. After touching a patient

3. After a procedure or any contact with patient body fluids

Is your facility hand hygiene compliant?

The McLaws Hand Hygiene Compliance Calculator™ is a simple, fast and free online check to ensure your hospital is meeting recommended compliance levels for hand hygiene.
